HIGH QUALITY PRODUCTS

# HANWU

## COMPANY PROFILE

Hanwu Iron and Steel (Shandong) Co., Ltd. is located in Jinan, the capital of Shandong Province. We are a manufacturer and exporter specialized in the research, production, retail, wholesale, packaging, after-sales of metal materials. We have been engaged in export trade for more than 10 years and have rich experience in this field.

### Our brand

Our company is a professional steel plate production enterprises, with cold rolling, hot rolling and other production lines. Our products can accept the quality test of the third party testing institutions, we pay attention to the reliability of product quality and the accuracy of test results

01

### PRODUCTION

Every product production steps are strictly controlled, we will never produce defective products. Each product can be inspected by a third party testing organization to ensure its conformity

02

### LOGISTICS

We have a strong production capacity. In addition to independent production, we also maintain cooperation with major steel mills. We have information to deliver the goods to you as soon as possible

03

### AFTER-SALES

We provide pre-sale, sale and after-sales service, 24 hours exclusive customer service, all of our products can accept the third-party testing institutions of professional quality inspection, quality care.

04

### OUR CUSTOMERS

Our products are exported to Hong Kong, Taiwan, Korea, Singapore, Malaysia, the Philippines, Vietnam, Turkey, Russia, Bulgaria, Malta, Canada, Australia, Iran, Qatar, Kuwait, Lebanon, Uruguay, Brazil, South Africa, Tanzania, Zimbabwe, Venezuela, Chile and many other countries.

## PRODUCT CATALOG

✓ Copper Plate

✓ Copper Pipe

✓ Copper Bar

Win-win cooperation

We have rich experience in foreign trade and our customers are all over the world. If you are interested, we can give you free samples. All our products can accept professional quality inspection by third-party testing institutions. We pay attention to the accuracy of test results and the reliability of product quality.

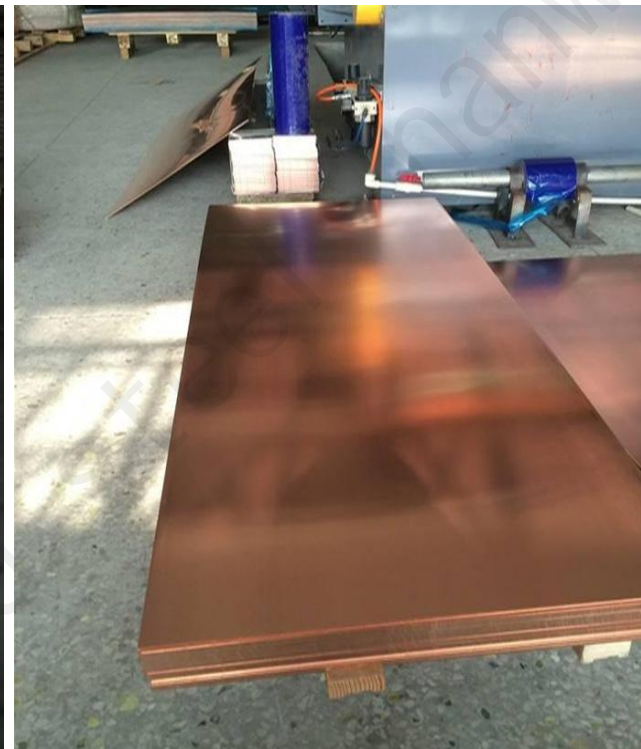

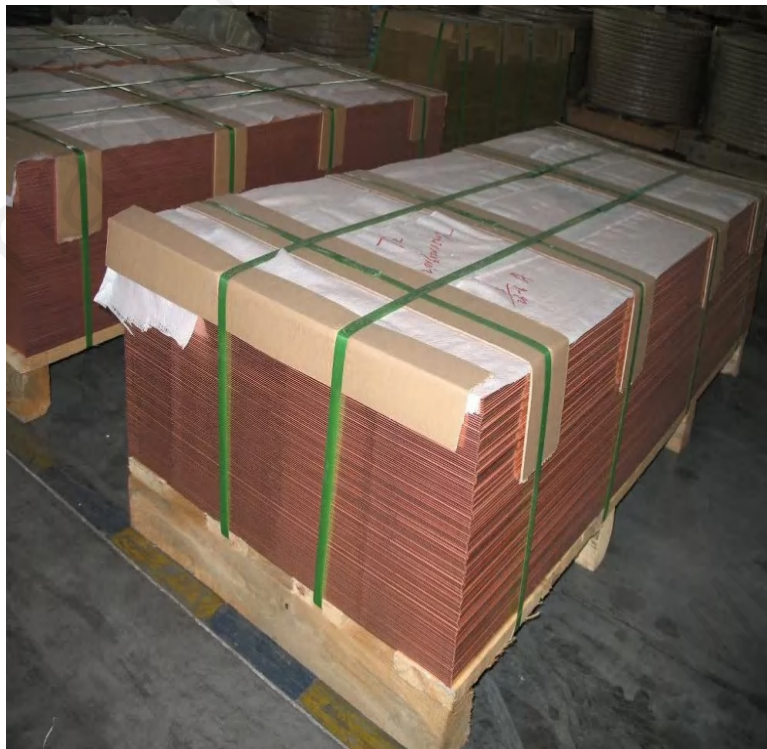

# Copper Plate

product name	copper plate
Impurity content	0.01
Electrical conductivity	standard
granularity	0.001
hardness	120-148
copper content	99.99
softening point	1080℃
specification	305mm-1200mm
quality grade	high-class
product attribute	environmental protection

## DESCRIBE

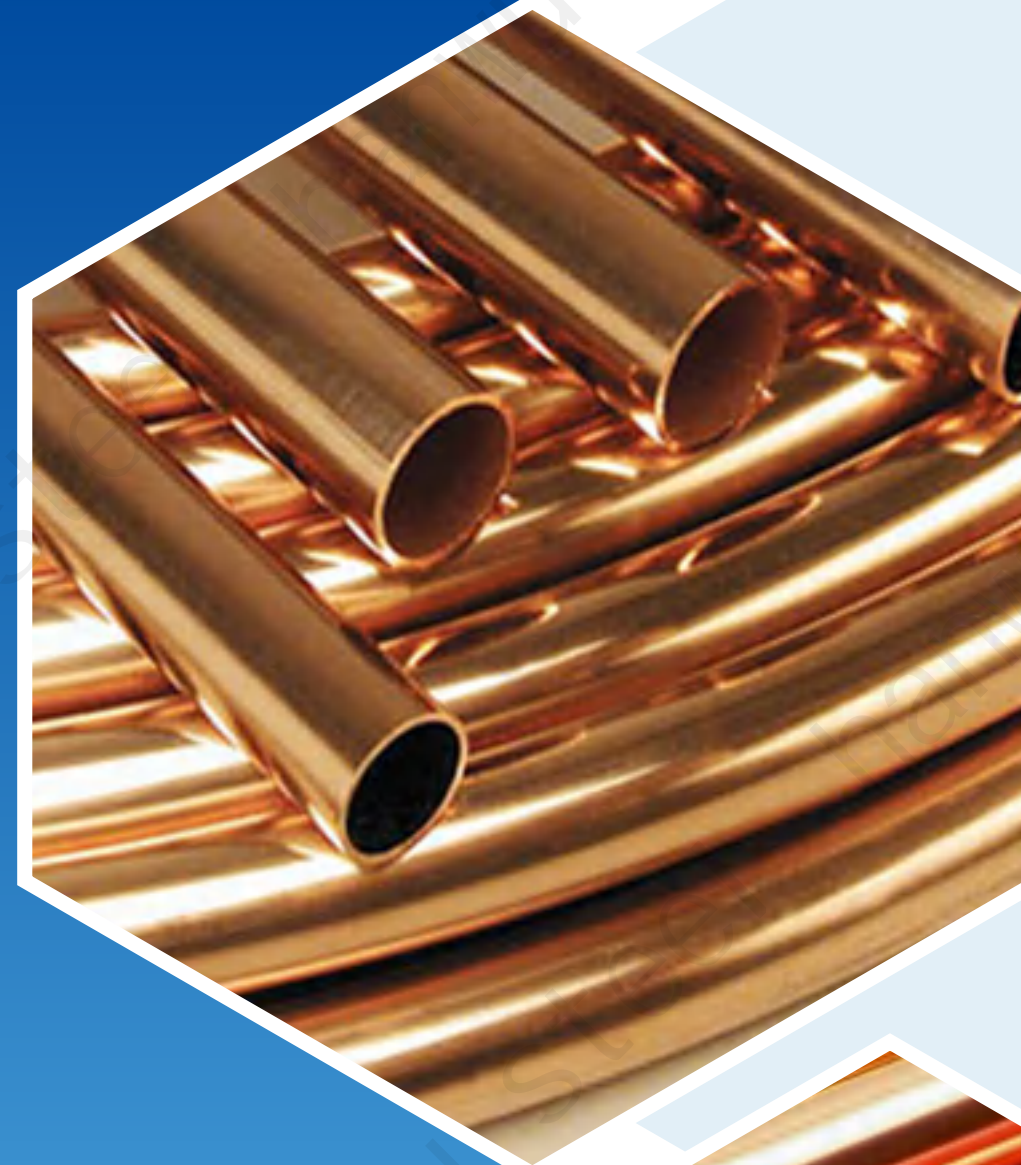

The conductivity and thermal conductivity of brass plate is second only to silver. It has good corrosion resistance and is widely used in the chemical industry to make conductive and thermal conductive equipment. Brass plate has excellent electrical conductivity, thermal conductivity, ductility and corrosion resistance. Mainly used for making generators, busbars, cables, switching devices, transformers and other electrical equipment and heat conduction equipment such as heat exchanger, pipe, solar heating device plate collector.

# Copper Pipe

Cu (Min):	99.7
Ultimate Strength (≥ MPa):	286
Outside Diameter:	2-910mm
Product name:	Copper tube
Outer diameter:	2-910mm
Processing services:	cutting/drilling
Specification:	National standard
Length:	oem
Elongation (≥ %):	30%
Thickness:	0.2-120mm

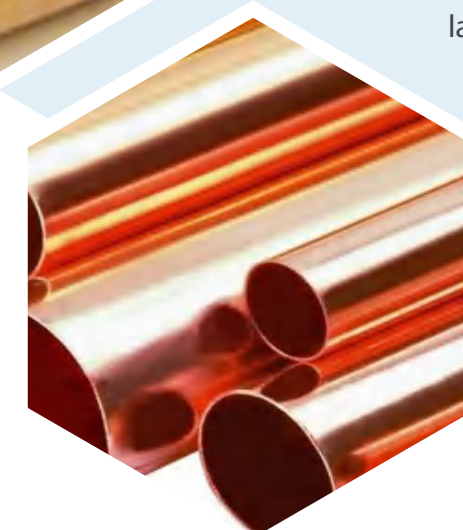

Copper is widely used, covering energy and petrochemical industry, transportation, electronic and electric power industry, machinery and metallurgical industry and other fields, playing a pivotal role.

The division of copper brands in each country is the same. Our company specializes in producing copper products of various specifications with high cost performance and large inventory.

Copper tube. A kind of non-ferrous metal tube, is pressed and drawn seamless tube. Copper pipe has the characteristics of good electrical conductivity, thermal conductivity, electrical accessories of electronic products and the main material of heat dissipation accessories, and become the first choice of modern contractors in all residential commercial housing water pipes, heating, refrigeration pipeline installation. Copper pipe has strong corrosion resistance, is not easy to oxidize, and is not easy to react with some liquid substances, and is easy to bend the shape.

# Copper Bar

Model Number:	Brass Rod
Shape:	Round
Grade:	Copper Alloy
Alloy Or Not:	Non-Alloy
Application:	Decorative
Length:	1-12m
Cu (Min):	57-63%
Processing Service:	Bending, Cutting, Punching

Brass rod is a rod shaped object made of copper and zinc alloy, named for its yellow color. The melting point of brass, which contains 56% to 68% copper, is 934 to 967 degrees. Brass has good mechanical properties and wear resistance, and can be used to manufacture precision instruments, ship parts, gun casings and so on. Zinc content is different, there will be different colors, such as zinc content of 18%-20% will be red and yellow, and zinc content of 20%-30% will be brownish yellow. In addition, brass makes a unique sound, so the eastern gongs, cymbals, bells, horns and other Musical Instruments, as well as western brass instruments are made of brass.

## TYPE TABLE

China	US		England	West Germany		Japan
GB	ASTM	CDA	BS	DIN	Digital	JIS
H96	C21000	210	CZ125	CuZn5	2.022	C2100
H90	C22000	220	CZ101	CuZn10	2.023	C2200
H85	C23000	230	CZ102	CuZn15	2.024	C2300
